The only thing that prevents a LEGO construction is the imagination (and a whole lot of bricks). Get book to see where you can go with an unlimited imagination and a lot of bricks.21 of 23 people found the following review helpful. The book focuses on description, not pictures.By EBDDo not mistake the book as a book full of pictures. The book is very descriptive. Do not get me wrong, there are definitely photographs, but they are rather small. There is much informative text which is not necessarily bad, but I expected many detailed images of the great works featured.So, I can recommend the book to fans of LEGO who want to know about the projects and people behind great pieces of art. But for people looking for rich pictures, this book is not what you are looking for.0 of 0 people found the

following review helpful. Fascinating book for all ages
By Mary K Feldstein
The grandsons, ages 6 and 9, love this book!! And the grownups are also enjoying it. The facts provided with each of the lego creations from around the world has led to some interesting discussions with the kids too.

From the Great Pyramid of Giza and Stonehenge to the Colosseum and the Taj Mahal, man has never shied away from an extreme building challenge, and the LEGO builders of the twenty-first century are no different. Whether they're recreating the works of ancient masters in brick form, building life-size superheroes, breaking world records with skyscraping towers, or firmly adjusting their thinking caps to program plastic robots, some LEGO fans are taking their passion for plastic to the extreme. Sarah Herman, the author of *A Million Little Bricks: The Unofficial Illustrated History of the LEGO Phenomenon*, has brought together some of the world's most ambitious builders in a fact-filled showcase of truly mind-blowing models for this exciting illustrated book. *Extreme Bricks* chronicles the first attempts at large-scale models embarked on by the LEGO Group as well as the early work of LEGOLAND artists and builders and contemporary LEGO Certified Professionals who build big for a living. It charts the rise of AFOLS (adult fans of LEGO) and their increasingly spectacular models and gargantuan collections. Packed with two hundred color photographs to shock and surprise, the book also explores the popular building competitions and includes a closer look at the shockingly smart LEGO MINDSTORMS robots that can do everything from solving a Rubik's Cube to building their own LEGO models.

About the Author
Sarah Herman is a British writer and editor. She has written for *Total Film*, *Star Wars Insider*, and the official magazines for *Lost*, *Grey's Anatomy*, and *CSI*. She has edited a number of other publications, including *The Ingenue*, *The Lab Magazine*, and *Get Fresh!*, and is the author of three books about LEGO, *The Classic Guide to Famous Assassinations*, and the bestselling *Does Anything Eat S**t?* She resides in the fine city of Norwich, England.
